We are an experienced manufacturer of precision engineering and are specialised in high precision gearing since we were founded in 1883. From a wooden gear with a diameter of 500 millimetres to a small helical gear with a diameter of only 0.9 millimetres and module 0,10 all intermediate steps are possible. Starting with wood, all kinds of plastics to non ferrous metals to high-tensile steels all sorts of materials are possible. Our customers act worldwide and are known for their premium and reliable products. They are found in all branches of optics, precision engineering, medical engineering and engineering. We design, produce and test inhouse from one single unit up to line production. Our favourable assortment of gears and straight racks makes our customer's prototyping and line production easy. Our Product range In our product range you find Straight and helical racks Internal gears Straight and helical gears Worms Wormwheels Thread milling Straight bevel gears Drive pulleys www.kremp-wetzlar.com
